

## **28. JUNIT TESTING TO CHECK WHETHER THE GIVEN USERNAME IS VALID OR NOT**

**G.SAMBASIVA**

**(192011089)**

### **AIM**

To Perform junit Testing to Check Whether the given Username is Valid or not

### **PROGRAM**

```
package sse;

import static org.junit.Assert.assertEquals;
import java.util.Scanner;

public class username {

    public static void main(String [] args)

    {

        Scanner in=new Scanner(System.in);

        System.out.println("enter the user name");

        String str1=in.nextLine();

        System.out.println("Reenter the user name");

        String str2=in.nextLine();

        assertEquals(str1,str2);

    }

}
```

## OUTPUT

The screenshot shows the Eclipse IDE with the file `username.java` open. The code defines a package `sse` and a class `username` with a `main` method that prompts the user to enter a name twice and asserts that the two inputs are equal. The Package Explorer on the left shows the project structure with `sqam` and `sse` packages. The Console at the bottom displays the output of the Java application, showing the prompts and the input `192011090` entered twice. The status bar at the bottom indicates the application terminated successfully.

```
1 package sse;
2
3 import static org.junit.Assert.assertEquals;
4
5 public class username {
6     public static void main(String [] args)
7     {
8         Scanner in=new Scanner(System.in);
9         System.out.println("enter the user name");
10        String str1=in.nextLine();
11        System.out.println("Reenter the user name");
12        String str2=in.nextLine();
13        assertEquals(str1,str2);
14    }
15 }
16
17
```

<terminated> username [Java Application] C:\Program Files\Java\jre1.8.0\_171\bin\javaw.exe (25-May-2023, 3:42:16 pm)  
enter the user name  
192011090  
Reenter the user name  
192011090

The screenshot shows the Eclipse IDE with the file `username.java` open. The code is identical to the previous screenshot. However, the Console at the bottom displays an exception message indicating a `ComparisonFailure` because the expected value `<19201109[0]>` did not match the actual value `<19201109[5]>`. The Package Explorer and the code editor are the same as in the first screenshot.

```
1 package sse;
2
3 import static org.junit.Assert.assertEquals;
4
5 public class username {
6     public static void main(String [] args)
7     {
8         Scanner in=new Scanner(System.in);
9         System.out.println("enter the user name");
10        String str1=in.nextLine();
11        System.out.println("Reenter the user name");
12        String str2=in.nextLine();
13        assertEquals(str1,str2);
14    }
15 }
16
17
```

<terminated> username [Java Application] C:\Program Files\Java\jre1.8.0\_171\bin\javaw.exe (25-May-2023, 3:48:35 pm)  
enter the user name  
192011090  
Reenter the user name  
192011095  
Exception in thread "main" org.junit.ComparisonFailure: expected:<19201109[0]> but was:<19201109[5]>  
 at org.junit.Assert.assertEquals(Assert.java:115)  
 at org.junit.Assert.assertEquals(Assert.java:144)  
 at sse.username.main(username.java:13)

## RESULT

Hence the junit Testing to Check Whether the given Username is Valid or not performed successfully.
